Model 4055 Dual Chamber Orifice Fittings

NuFlo Model 4055 Dual Chamber Orifice Fittings are compact, streamlined and rugged featuring a simple and rapid method for changing or inspecting orifice plates under pressure. The orifice fittings feature a ball-type construction for opening and closing "without" a complicated gear mechanism.

The unique construction incorporating a ball closure with spring-loaded, self-lubricating, Moly-filled Teflon® floating seals eliminates any need for periodic lubrication. All NuFlo dual chamber orifice fittings are manufactured in accordance with ANSI and ATSM standards and available in 2", 3", 4" and 6" sizes.

Features

- Compact construction
- Rapid method for changing orifice plates under pressure
- Self-lubricating Moly-filled Teflon® seals (periodic lubrication not required)
- Orifice plate O-ring seal provides positive seal around orifice plate
- Positive orifice plate alignment assured with closure of chamber lid and internal ball stop

Standard Specifications

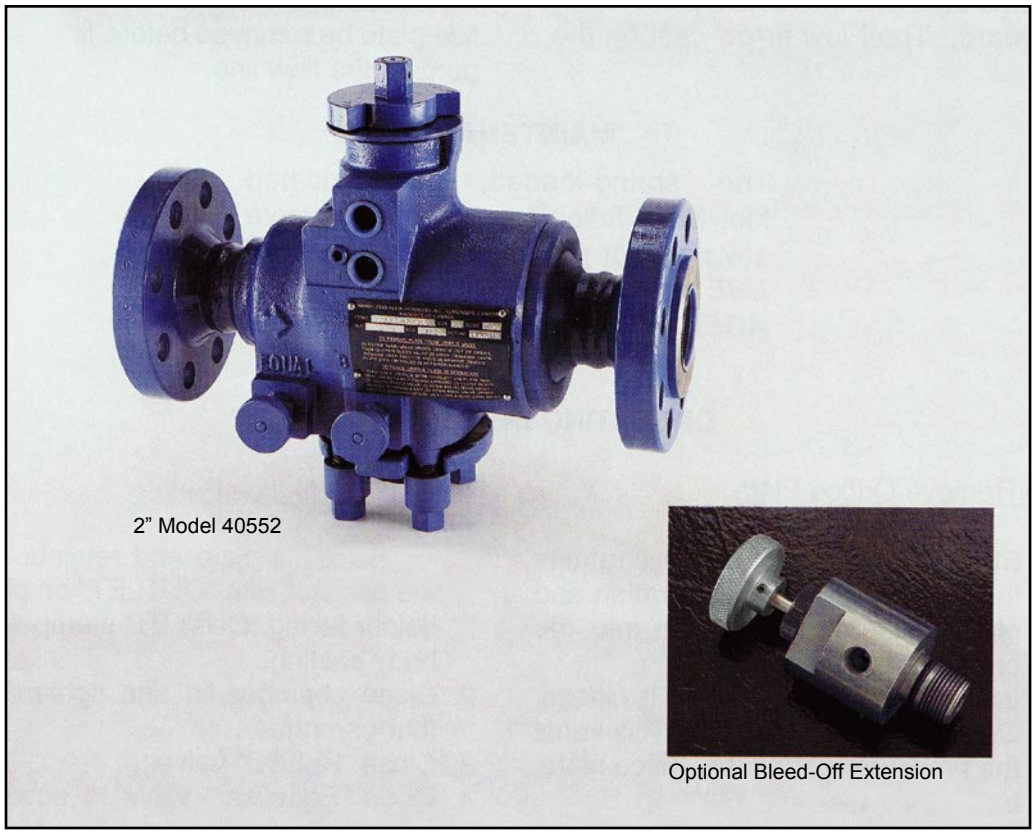

Meter Connections: All NuFlo orifice fittings are provided with two sets of flange taps located 1" on each side of the orifice plate. Flange tap meter connections are 1/2" NPT, internal tap hole sizes follow latest AGA/API recommendations. Internal edges of tap holes are free from burrs and slightly rounded.

Two types of NuFlo orifice fittings are available:
- Flanged Type, either raised face or ring joint
- Flangeweld Type, having a weldneck inlet and a flanged outlet

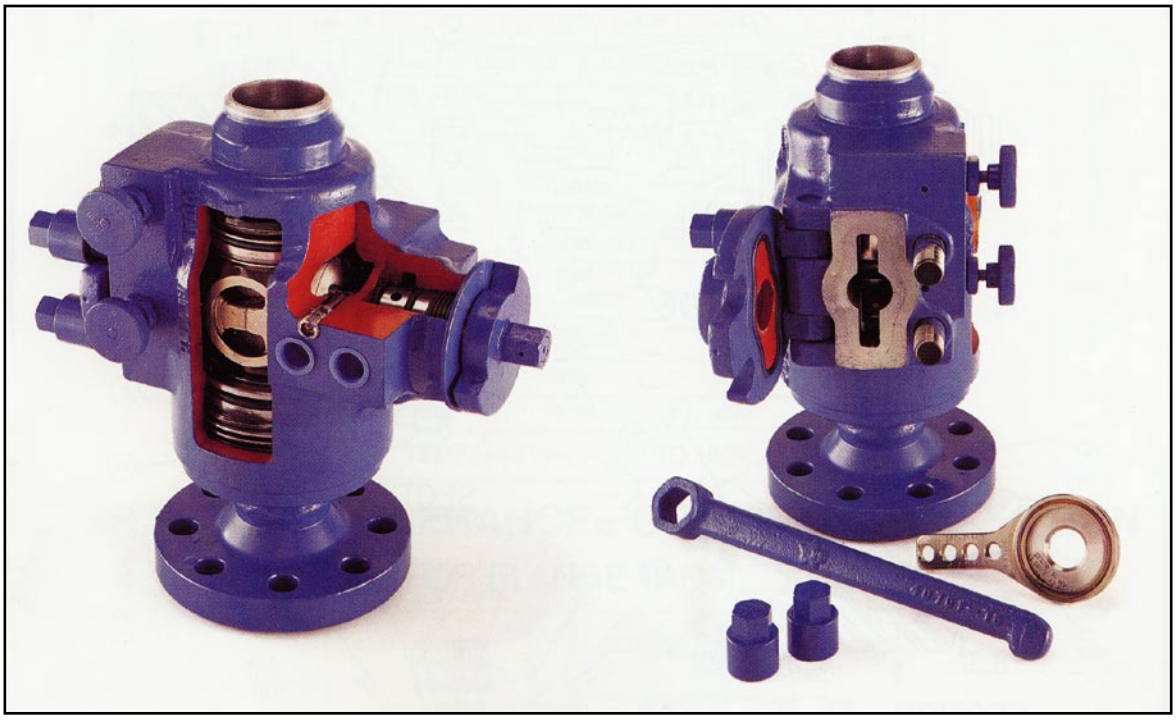

When Ordering, Specify:

- Quantity
- Assembly part number
- Type of dual chamber orifice fitting (flanged, flangeweld)
- Service (sweet, (H_2S) sour)
- Flange rating
- Flange type (raised face, ring type joint)
- Pipe schedule
- Orifice plate bore size(s)

Dual chamber orifice fitting, flanged type

Cut-away, dual chamber orifice fitting, flangeweld type (2, 3 and 4 in.)

Dual chamber orifice fitting, flangeweld type (6 in.)

Installation and Maintenance

It is recommended that the NuFlo Dual Chamber Orifice fitting be placed in the line with the two 1/2" NPT flange taps and instruction plate facing upward. The flow arrow cast on the body must correspond with flow direction of line. The orifice fitting is shipped with an orifice plate installed in operating position. It is suggested that the orifice plate be removed before flushing or purging the flow line.

The spring-loaded, self-lubricated Moly-filled Teflon® ball seals eliminate any need for periodic lubrication. ***Grease is not required for sealing.***

Operating Instructions

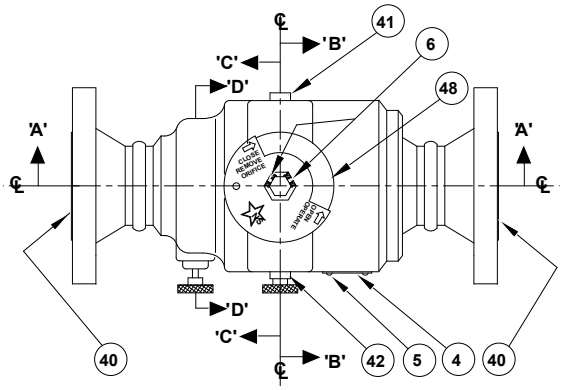

Removing an Orifice Plate

1. Close main orifice fitting. This rotates the orifice plate out of operation and places the bypass section into the orifice fitting bore.
2. Insure "EQUALIZER" valve is closed.
3. Open the "BLEED" valve. This vents the pressure around the orifice plate and chamber lid.
4. Open the chamber lid by loosening the hinge bolt cap nuts and removing the two top cap nuts. This will allow the chamber lid to open freely.
5. Remove orifice plate and retainer with the wrench supplied with unit.

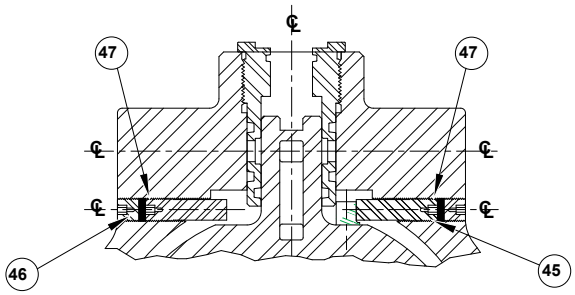

Replacing an Orifice Plate

1. Place orifice plate and retainer into the ball slot with "OUTLET" on plate holder facing "OUTLET" stamped on body casting.
2. Close chamber lid and tighten the four cap nuts.
3. Close "BLEED" valve.
4. Open "EQUALIZER" valve to equalize ball seal pressure.
5. Open main orifice fitting. This places orifice plate into operation and removes bypass section from the bore.
6. Close "EQUALIZER" valve.

NOTE: Specify pressure rating when ordering redress kits.

Model 4042 Single Chamber Orifice Fittings

The NuFlo Single Chamber Orifice Fitting is designed for use in installations in which the line can be depressurized to change or inspect the orifice plate. Economical and lightweight, the single chamber features a simplicity of design with a minimum number of parts. A quick and easy method for removing orifice plates minimizes shutdown time. The interchangeability of the orifice plates and retainers between the NuFlo Dual Chamber and Single Chamber orifice fittings also provides an economy in inventory requirements.

Standard Specifications

Single chamber orifice fittings are available in flangeweld and weldneck types. All NuFlo single chamber orifice fittings meet AGA/API specifications. Two sets of 1/2” NPT flange taps are provided on all single chamber orifice fittings. They are available in 2”, 3” and 4” sizes.

When Ordering, Specify:

- Quantity
- Assembly part number
- Type of single chamber orifice fitting (flangeweld, weldneck)
- Service (sweet, (H_2S) sour)
- Flange rating
- Flange type (raised face, ring type joint)
- Pipe schedule
- Orifice plate bore size(s)

Installation and Maintenance

Install the NuFlo single chamber orifice fitting with the two 1/2” NPT flange taps and instruction plate facing upward. The flow arrow cast on the body chamber lid must correspond with flow direction of line. The orifice fitting is shipped with an orifice plate installed. Remove the orifice plate before flushing or purging the line. Maintenance is minimal; lubrication is not required.

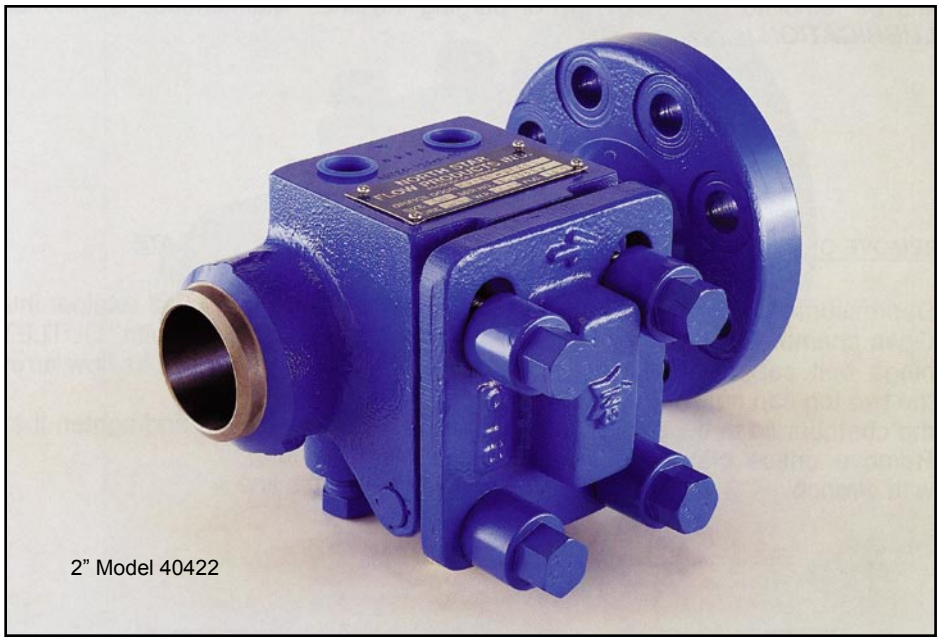

Operating Instructions

Removing Orifice Plate

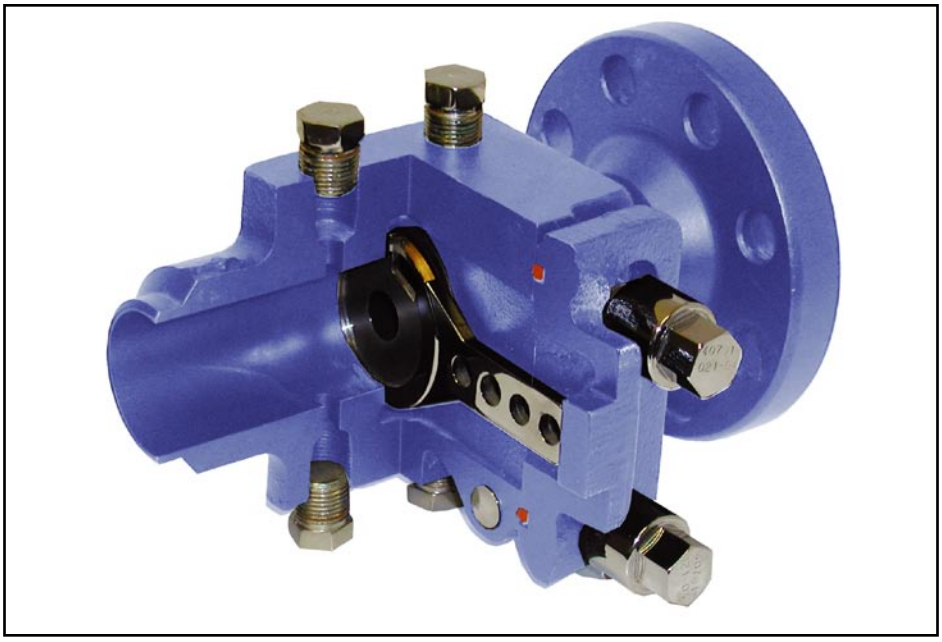

1. Depressurize line.
2. Open chamber lid by loosening the hinge bolt cap nuts and removing the two top cap nuts. This will allow the chamber lid to open freely.
3. Remove orifice plate and retainer.

Replacing Orifice Plate

1. Place orifice plate and retainer into the slot of the fitting with “OUTLET” facing same direction as flow arrow on chamber lid.
2. Close chamber lid and tighten the four cap nuts.
3. Pressurize line.

Meter Runs

The meter runs are fabricated by trained manufacturing personnel with complete facilities for machining, welding, gauging and inspection. This produces a product with quality and metering accuracy not possible with field-fabricated units.

All meter runs are factory-aligned and welded with special equipment that guarantees a straight, smooth meter run without defects. Standard lengths meet AGA/API requirements.

Meter Run Alignment

Orifice fitting to meter run alignment can be specified with dowel pins. This option assures proper bore alignment.

MODEL 4055 DUAL CHAMBER METER RUNS

MODEL 4042 SINGLE CHAMBER METER RUNS

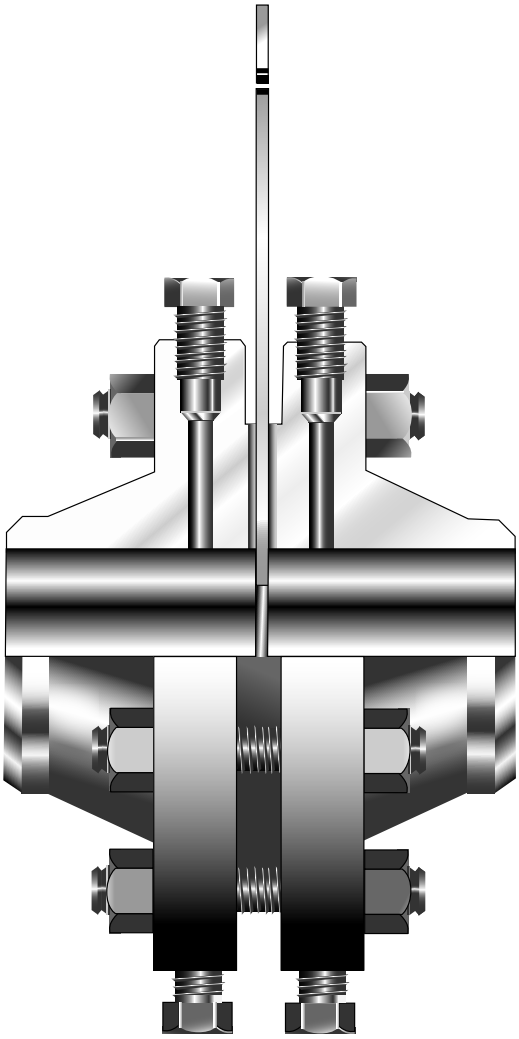

ORIFICE FLANGE UNION METER RUNS

NOTES: METER RUNS CAN BE MANUFACTURED TO SPECIFIC CUSTOMER REQUIREMENTS. METER RUNS CAN BE SUPPLIED WITH THREADOLETS FOR 1/2”, 3/4” AND 1” NPT AND ANY COMBINATION OF BEVELED FOR WELDING OR FLANGED ENDS.

Orifice Flange Unions

Orifice flange unions are available in 300 lb. ANSI through 2500 Ib. ANSI. They are available in SA 105N, SA350 LF2, 304 ST/STL, 316 ST/STL or MONEL materials. All flanges conform to the ANSI B16.5 Flange Piping Code. All flanges are machined to close tolerances and are carefully inspected before shipment. Orifice flange assemblies are provided with studs, nuts, gaskets, jack screws and pipe plugs.

Paddle Type Orifice Plates

Note: Paddle type orifice plates must be ordered separately.

NuFlo paddle type orifice plates are designed for use between orifice flange unions. The line size, flange rating, material and bore size are stamped on the handle. Paddle plates are available in type 304 or 316 stainless steel. Other materials are available on special order.

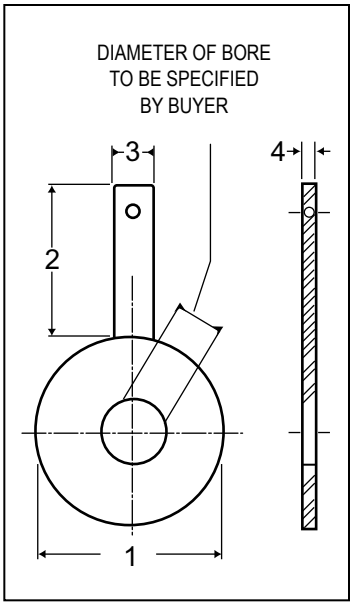

When Ordering, Specify:

- Quantity
- Size, flange rating, pipe schedule
- Material (flange, studs, nuts and gaskets)
- Orifice bore size
- Orifice plate thickness
- Orifice plate material

*Other sizes available on request

Orifice Plate Assembly

The orifice plate retainer assembly is used in both the dual and single chamber orifice fittings. The orifice retainer and chamber lid are designed to assure the center alignment of orifice bore with the line bore. The chamber lid cannot be closed without centering the orifice in the correct position. If the plate is not correctly centered, closing the lid will align the plate automatically. The plate retainer and the dovetail ring are nickel plated for corrosion resistance.

The orifice retainer, dovetail ring and O-ring together hold the orifice plate in a rigid position and perpendicular to the bore at all times.

Universal orifice plates are stocked in 1/8-in. increments, beginning at 0.125 inch. The orifice bore size and outlet are clearly etched on each plate. All AGA/API requirements are specifically met.

The NuFlo orifice plate is interchangeable with other universal type plates. Standard orifice plates are constructed of 316 stainless steel; however, they are available in other material upon special request. Each orifice plate has a 15-30 micro-inch finish.

Straightening Vanes

The use of straightening vanes in meter runs serves a twofold purpose: (1) the turbulence often created in a complex piping system is straightened and smoothed to a normal flow pattern and (2) the amount of straight pipe required preceding an orifice is reduced. NuFlo offers both flanged and pin type straightening vanes.

Vanes are available with carbon steel, 304 or 316 stainless steel tubing welded together and securely attached into the meter run. The tubes are reamed as thin as is practical at both ends and are constructed so as to minimize the possibility of vibration. All vanes are manufactured according to the latest AGA/API specifications.

Other sizes available on request.
When ordering specify: part number, type of material and pipe bore size.

Installation

The flange type straightening vane is held in place by a flange ring between two pipe flanges.

The pin type straightening vane is held in place by an allen set screw. The set screw seats into a countersunk hole in the center of a welded pad that is welded to the straightening vane itself. The tapped hole in the pipe is sealed off by welding a threadolet around the hole. A pipe plug is installed into the threadolet.

WARRANTY - LIMITATION OF LIABILITY: Seller warrants only title to the products, software, supplies and materials and that, except as to software, the same are free from defects in workmanship and materials for a period of one (1) year from the date of delivery. Seller does not warranty that software is free from error or that software will run in an uninterrupted fashion. Seller provides all software “as is”. THERE ARE NO WARRANTIES, EXPRESS OR IMPLIED, OF MERCHANTABILITY, FITNESS OR OTHERWISE WHICH EXTEND BEYOND THOSE STATED IN THE IMMEDIATELY PRECEDING SENTENCE. Seller’s liability and Buyer’s exclusive remedy in any case of action (whether in contract, tort, breach of warranty or otherwise) arising out of the sale or use of any products, software, supplies, or materials is expressly limited to the replacement of such products, software, supplies, or materials on their return to Seller or, at Seller’s option, to the allowance to the customer of credit for the cost of such items. In no event shall Seller be liable for special, incidental, indirect, punitive or consequential damages. Seller does not warrant in any way products, software, supplies and materials not manufactured by Seller, and such will be sold only with the warranties that are given by the manufacturer thereof. Seller will pass only through to its purchaser of such items the warranty granted to it by the manufacturer.
